

ENGINEERING OPEN HOUSE MARCH 10-11, 1967

Room 162 of the Electrical Engineering Building was assigned for zetetics. The following exhibits were arranged in this room; whose entrance was marked by a sign prepared by Mr. Taylor.

- (1) Model of Zetetic Institute with 6 drawings
- (2) Illuminated chart of the system of knowledge
- (3) Collection of books and pamphlets by J. T. T.
kept together on a chain
- (4) Overhead projector with 5 transparencies showing the interrelationship of various areas of knowledge by Alan Taylor
- (5) Projector for slides ($3\frac{1}{2}$ x 4) with a collection of 19 slides. The last one was "Amplification of Knowledge." These were not shown due to lack of time.
- (6) Zetetic folders were handed out

Alan Taylor, Lary Belman, Janice Bear, Professor Tykociner and a number of students of the zetetics class were there to explain the displays.. It was found difficult for one person to show the slides and at the same time for another person to explain the chart. One could conclude that the general interest was larger than it was last year.
